[https://htetwai18.github.io/my\\_portfolio/](https://htetwai18.github.io/my_portfolio/)

### EDUCATION

BSc (Hons) Computing  
University of Greenwich, UK  
NCC Level 5 Diploma in Computing  
NCC Level 4 Diploma in Computing  
Final Part2 MBBS Student (University of Medicine 2)

### CERTIFICATIONS & TRAINING

Professional Mobile Development (Flutter)  
E-commerce & Business Apps  
Mobile Application Development & Project Experience  
PADC Myanmar

### CORE COMPETENCIES

Revenue-driven mobile app development  
End-to-end Flutter application delivery  
UI/UX design & prototyping  
Real-time data integration & state management  
Mobile team leadership & collaboration  
Operational efficiency & process optimization

### TECHNICAL SKILLS

**Languages:** Dart, Java (Basic), C#, Kotlin (Basic), Swift (Basic), JavaScript (Basic), HTML/CSS, SQL

**Frameworks / Platforms:** Flutter, .NET (Basic)

**Mobile App Dev:** Firebase, API Integration, Offline Storage (Hive, SharedPreferences), State Management (Provider, Riverpod)

**Tools / Collaboration:** Git, Google Sign-in, Socket.io, Local Notifications, Agora Live Streaming

### LANGUAGES

Burmese (Native)  
English (Fluent)

### REFERENCES

### PROFILE

Results-driven Flutter Developer with nearly 3 years of experience delivering revenue-driven mobile applications at Whatif Solutions Sdn Bhd (Malaysia) and K-Win Technologies (Myanmar). Skilled in building stable, scalable platforms with intuitive UI/UX across ecommerce, POS, social, membership, and IoT related apps, driving business growth and market adoption. Proven in leading mobile teams, collaborating with stakeholders, and delivering production-grade apps that enhance operational efficiency and user engagement.

I am eager to join a dynamic mobile development team, bringing my expertise in producing revenue-generating, user-centric applications to support business growth and strengthen market presence.

### PROFESSIONAL EXPERIENCE

#### Mobile Developer (Contract)

WHATIF SOLUTIONS SDN BHD, Malaysia | May 2025 - Dec 2025

(IoT, Enterprise Ops, Device-Integrated Systems)

- Owned production stability for IoT smart-home and online social mobile applications, supporting user interactions and operational reliability.
- Took ownership of legacy codebases, performing targeted refactoring and rapid bug fixes, reducing critical issue resolution time from multiple days to same-day turnaround.
- Collaborated with backend and system teams to ensure full reliable data flow and secure transaction handling for business-critical modules.
- Improved application responsiveness and performance, shortening average user interaction wait times by 2-3 seconds across key flows.
- Supported client-facing delivery timelines by proactively resolving production issues, preventing release delays and minimizing operational disruptions during active contracts.

### Projects

#### Digicraft Smart Home App

IoT mobile application enabling users to monitor and control smart home devices.

- Maintained and refactored legacy code to stabilize device connectivity, achieving consistently reliable connections with minimal incident occurrence in production use.
- Improved real-time device response latency from around 7 seconds to 3-5 seconds, enhancing overall user control experience.
- Resolved critical production issues with same-day turnaround, maintaining 99% application uptime.

## **Zcultures App**

Global mobile platform connecting brands, creators, and nightlife venues using an online-to-offline (O2O) engagement model.

- Maintained and refactored a legacy Flutter codebase, improving readability, modularity, and long-term maintainability within an MVC architecture.
- Resolved critical production bugs and UI inconsistencies, delivering rapid fixes to stabilize live iOS and Android releases.
- Optimized performance issues in real-time feeds and AI-driven recommendation rendering to improve user experience and responsiveness.
- Implemented new features and enhancements based on evolving business requirements, ensuring seamless integration with existing modules.
- Collaborated with backend services (PHP) and data-driven features to support scalable, personalized user interactions on production apps.

## **Flutter Developer (Part-Time)**

My Day Thu Kywal | Sep 2024 - Jan 2025

- Delivered and maintained core mobile features for a social and live-streaming platform, supporting thousands of daily user interactions with stable performance.
- Owned end-to-end implementation of engagement features (social interactions and live streaming), ensuring smooth user experience during peak usage periods.
- Coordinated directly with Agora (third-party live streaming service provider) to clarify requirements, align technical flows, and reduce integration risks.
- Optimized application performance and runtime behavior, reducing live-session interruptions and improving session stability.
- Balanced part-time delivery commitments with production-quality standards, ensuring reliable releases and minimal post-deployment issues.

## **Projects**

### **Weday App**

Social networking and live-streaming platform enabling user interaction and real-time engagement.

- Delivered core social features (comments, nested replies, reactions), supporting 1,000 - 1,200 daily interactions with sub-120ms response times for text-based engagement.
- Integrated live-streaming services via Agora, reducing stream join latency from around 6 seconds to 2 seconds and stabilizing sessions for over 1,500 - 3,000 monthly viewers.
- Delivered performance optimizations that stabilized live streaming sessions, improving viewer retention and overall content engagement.

### **Flutter Developer**

K-Win Technologies | Sep 2022 - Apr 2025

- Delivered end-to-end Flutter development across revenue-generating ecommerce, retail POS, clinic membership, and internal management applications, supporting multiple key client businesses simultaneously.
- Translated business requirements from brand owners, clinic operators, shop owners, and management teams into scalable mobile workflows, reducing requirement clarification cycles and delivery delays.
- Owned mobile-side architecture including UI/UX implementation, API integration, offline data handling, and real-time updates, ensuring full operational reliability in low-connectivity environments.
- Improved development efficiency by introducing reusable UI components and structured state management, accelerating feature delivery across projects.
- Ensured application stability and production readiness by collaborating closely with backend teams and proactively resolving logic and data consistency issues before release.

## **Projects**

### **ARFI Ecommerce App**

Revenue-driven B2C ecommerce mobile application for the ARFI brand, enabling customers to browse products, place orders, and complete mobile checkout.

- Delivered end-to-end ecommerce workflows (product catalog, cart, checkout, order tracking), supporting approximately 150 - 200 daily orders and improving operational efficiency during campaign periods.
- Optimized checkout and API response handling, reducing transaction latency from 5 seconds to 2 seconds and improving conversion while reducing cart abandonment.
- Implemented offline data caching and state management to ensure uninterrupted ordering during network instability, minimizing failed or abandoned orders.

### **Dr. Rejvue Aesthetic Clinic Membership App**

Client-facing membership application for an aesthetic clinic, supporting treatment booking, product purchases, and loyalty point management.

- Delivered membership workflows for appointment booking, product ordering, and loyalty point accumulation, supporting repeat visits and ongoing customer engagement.
- Implemented real-time point synchronization using Socket.io, eliminating manual reconciliation and significantly reducing recurring customer complaints related to points.
- Designed offline-first data handling using Hive and SharedPreferences to ensure over 99.9% uninterrupted clinic operations and improve staff efficiency during peak hours.

### **Kwin HR Management App**

Internal HR application for attendance tracking, payroll visibility, and employee self-service.

- Independently designed and delivered the complete mobile application, enabling digital attendance tracking and payroll previews for over 100 employees.
- Automated employee check-in and check-out workflows, replacing manual end-of-month attendance consolidation with near real-time availability for payroll calculations.
- Worked closely with backend teams to ensure mobile attendance and payroll workflows remained reliable during daily check-in/check-out usage, avoiding data gaps and manual corrections.

### **Yankin Bubble Tea POS App (Legacy Kotlin → Flutter)**

Retail POS system for a bubble tea shop, supporting in-store sales and staff operations.

- Rebuilt a legacy Kotlin-based POS system in Flutter, enabling 2 - 3× faster transaction processing and supporting higher order throughput during peak business hours.
- Implemented offline transaction storage using Hive and SharedPreferences, allowing sales operations to continue during connectivity outages without transaction loss.
- Simplified POS UI/UX for store staff, reducing the need for assisted training and helping new employees adopt daily transaction workflows faster.

### **Kwin Client Management App**

Internal application for managing client subscriptions and service access across Kwin-delivered products.

- Designed and built the full UI without a dedicated designer, enabling internal teams to manage client access and service lifecycles efficiently.
- Automated service subscription end-date calculations, eliminating manual tracking errors and improving billing and customer access accuracy.
- Improved internal operational visibility, shortening customer access resolution time from multiple days to same-day handling.

### **Suzuki Smart Order App**

Dealer-facing mobile application for Suzuki Myanmar to manage vehicle orders and operational notifications.

- Served as mobile team lead, delivering the core Flutter framework supporting dealer order placement and tracking.
- Integrated API workflows, Google Sign-in, and socket-based notifications to reduce order mismatches, prevent duplicate orders, and support near real-time order retrieval during app re-entry.
- Automated dealer order confirmations, cutting cycles from 2 - 3 days to under 6 hours.
